PROFILE

Full-Stack Developer with 2 years building production software with Node.js, TypeScript, React and Angular. I worked on SIGIES, the national platform that runs higher-education admissions in Cuba, and I build KWAD, a multi-tenant B2B SaaS for retail already used in production by its first client. I focus on maintainable architecture, stable API contracts and end-to-end product work.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS
Backend: Node.js, NestJS, Fastify, Express, REST APIs, JWT, Zod, BullMQ
Frontend: React, Angular, Next.js, Vite, Tailwind CSS, TanStack Query, Zustand
Data: PostgreSQL, MongoDB, Redis, Prisma, TypeORM
Real time: WebSockets, Socket.IO, MQTT
Tools and practices: Docker, Git, Turborepo, Vitest, Railway, Vercel, multi-tenancy, RBAC, DDD, Agile

EXPERIENCE

Full-Stack Developer & Founder · KWAD

Apr 2026 – present · Remote

Multi-tenant B2B SaaS for retail that unifies POS, inventory, purchasing, cash handling and per-tenant online stores. I design and build it solo; it is in beta and already used in production by its first client.

- Multi-tenant architecture with per-request isolation (AsyncLocalStorage) and dynamic RBAC with preset and custom roles per organization.
- Three apps with separate identity models: staff back-office, per-tenant storefronts on subdomains and a platform admin console.
- POS with cashier-, terminal- and shift-aware flows, idempotent sale submission and an inventory movement ledger across stores and warehouses.
- Multi-currency accounting with a scheduled exchange-rate sync (BullMQ + Redis) and reports exported to CSV, XLSX and PDF.
- Turborepo monorepo: Fastify, Prisma and PostgreSQL API and React apps, deployed on Railway and Vercel.

Software Engineer · FORTES, University of Informatics Sciences

Sep 2024 – Oct 2026 · Havana, Cuba · Hybrid

SIGIES, the national platform that runs higher-education admissions in Cuba, used by ministry staff and by university and provincial admission boards.

- Provided technical and functional support to the legacy production system (PHP), keeping it stable through peak load in every admission cycle.
- Developed modules for the new version with NestJS and Angular, including user-role management.
- Migrated legacy modules incrementally, with PostgreSQL data modeling and API design, in Docker-based environments.
- Worked in sprints alongside functional analysts.

PROJECTS

PlataformaIoT · Personal project · 2025

github.com/RusoMDK/PlataformaIoT

Platform to register IoT devices, receive their readings in real time and display them in configurable dashboards.

- MQTT ingestion with a worker that persists to MongoDB and streams live updates over Socket.IO.
- Device provisioning and Arduino sketch generation; rule-based alerts and exports to Excel, PDF and CSV.
- Security with cookie-based JWT, CSRF protection, TOTP 2FA and roles; API documented with Swagger. Express, MongoDB, React, Vite and Tailwind CSS.

EDUCATION

B.Sc. in Computer Science Engineering · University of Informatics Sciences (UCI), Havana · 2019 – 2024
Thesis: real-time collection and visualization of test parameters from physical devices (NestJS, Angular, TypeORM, PostgreSQL, WebSockets, MQTT).

Postgraduate studies in Advanced Informatics · UCI · 2025 – 2026
Machine Learning, Big Data with Apache Spark, IoT systems and cybersecurity.

PUBLICATION

Co-author of *Smart IoT: secure physical sensor management and AI-driven automation*, presented at UCIENCIA 2025.

LANGUAGES

Spanish: native · English: basic (A2), working toward B2
